4. Screwdriver(s)

\*Anchors may be required based on your home's construction and where you are installing the brackets.

# INSTALLATION INSTRUCTIONS SHUTTERS

Make it MID\*CENTURY, LLC 2017

## METHOD OF ASSEMBLY

**PREP:** Assess the area where you wish to mount your shutters. If you are mounting the shutters over siding, is there sufficient blocking under the siding to hold the weight of the shutter? If not, you may need to add blocking. Is your home masonry? If so, you will need to purchase masonry anchors to work with the provided screws.

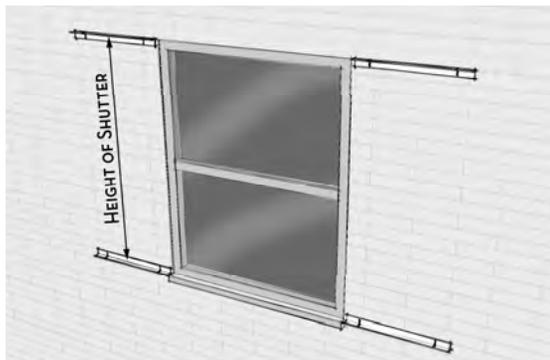

FIGURE 1

**MEASURE:** Measure and mark with a pencil or marker where the holes are for your top and bottom mounting brackets. The slots in the mounting brackets are oblong to adjust for small vertical discrepancies.

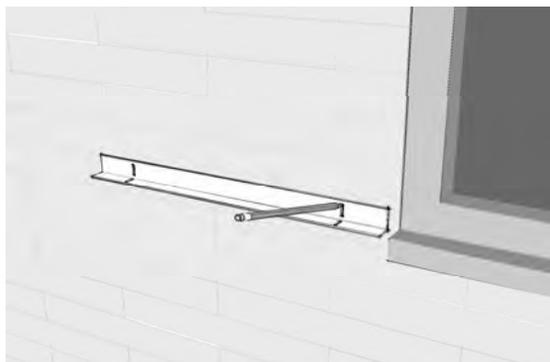

FIGURE 2

**MOUNT BRACKETS:** Pre-drill your wall where you will mount the brackets. Mount the brackets with the included 1 1/2" screws and any anchors if necessary.

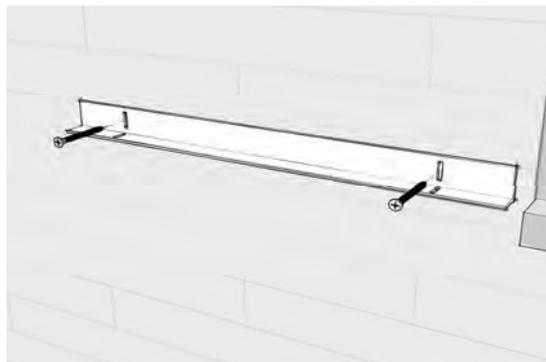

FIGURE 3

**MOUNT SHUTTERS:** Sit shutter in brackets and push back as far as possible to make sure the shutter is seated correctly. Mark where the slots from the bracket hit bottom and top of the shutter. Using a 1/8" drill bit, pre-drill holes to receive the 1" screws included with the kit. (Important: Holes MUST be pre-drilled to avoid splitting the material.) Replace shutter and drill up and down through the brackets into the shutter to complete your installation. Do not over-tighten.

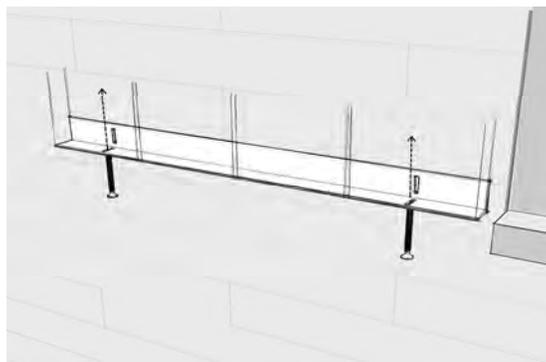

FIGURE 4

## ADDITIONAL NOTES

**HEIGHT:** If you have ordered a shutter with a height greater than 55", you will receive four additional short brackets (two per shutter) and accompanying screws. Short brackets mount on the sides of the shutter at mid-point of the height and are mounted to the wall and the shutter as per the other bracket directions.

**SPECIAL SHAPES:** If you have ordered a specially shaped shutter (round-top, V- or X-shape) you will receive small brackets to anchor the end(s) with the special shape. Mount small brackets to the wall and shutter per the prior directions. Small brackets should be mounted at the mid-point of the arch or mid-point of the V on the V- and X-shaped shutters.

**FINISH:** Shutters come pre-primed. You may want to paint your shutters their finish color prior to installation.
